Nowadays many shopping mall websites, only display the details about the shopping building and facilities, not much about the shops inside that shopping mall. In this shopping mall system, we create sub-sections for shops inside the shopping mall. By using those sub-sections small shop owners can display their products on the main website. This system is generated to do the online purchasing and to manage the stores in a one system where the client can easily do their purchases and to access the stores and update the stores as necessary.
